

# Livestock Disease in Ethiopia

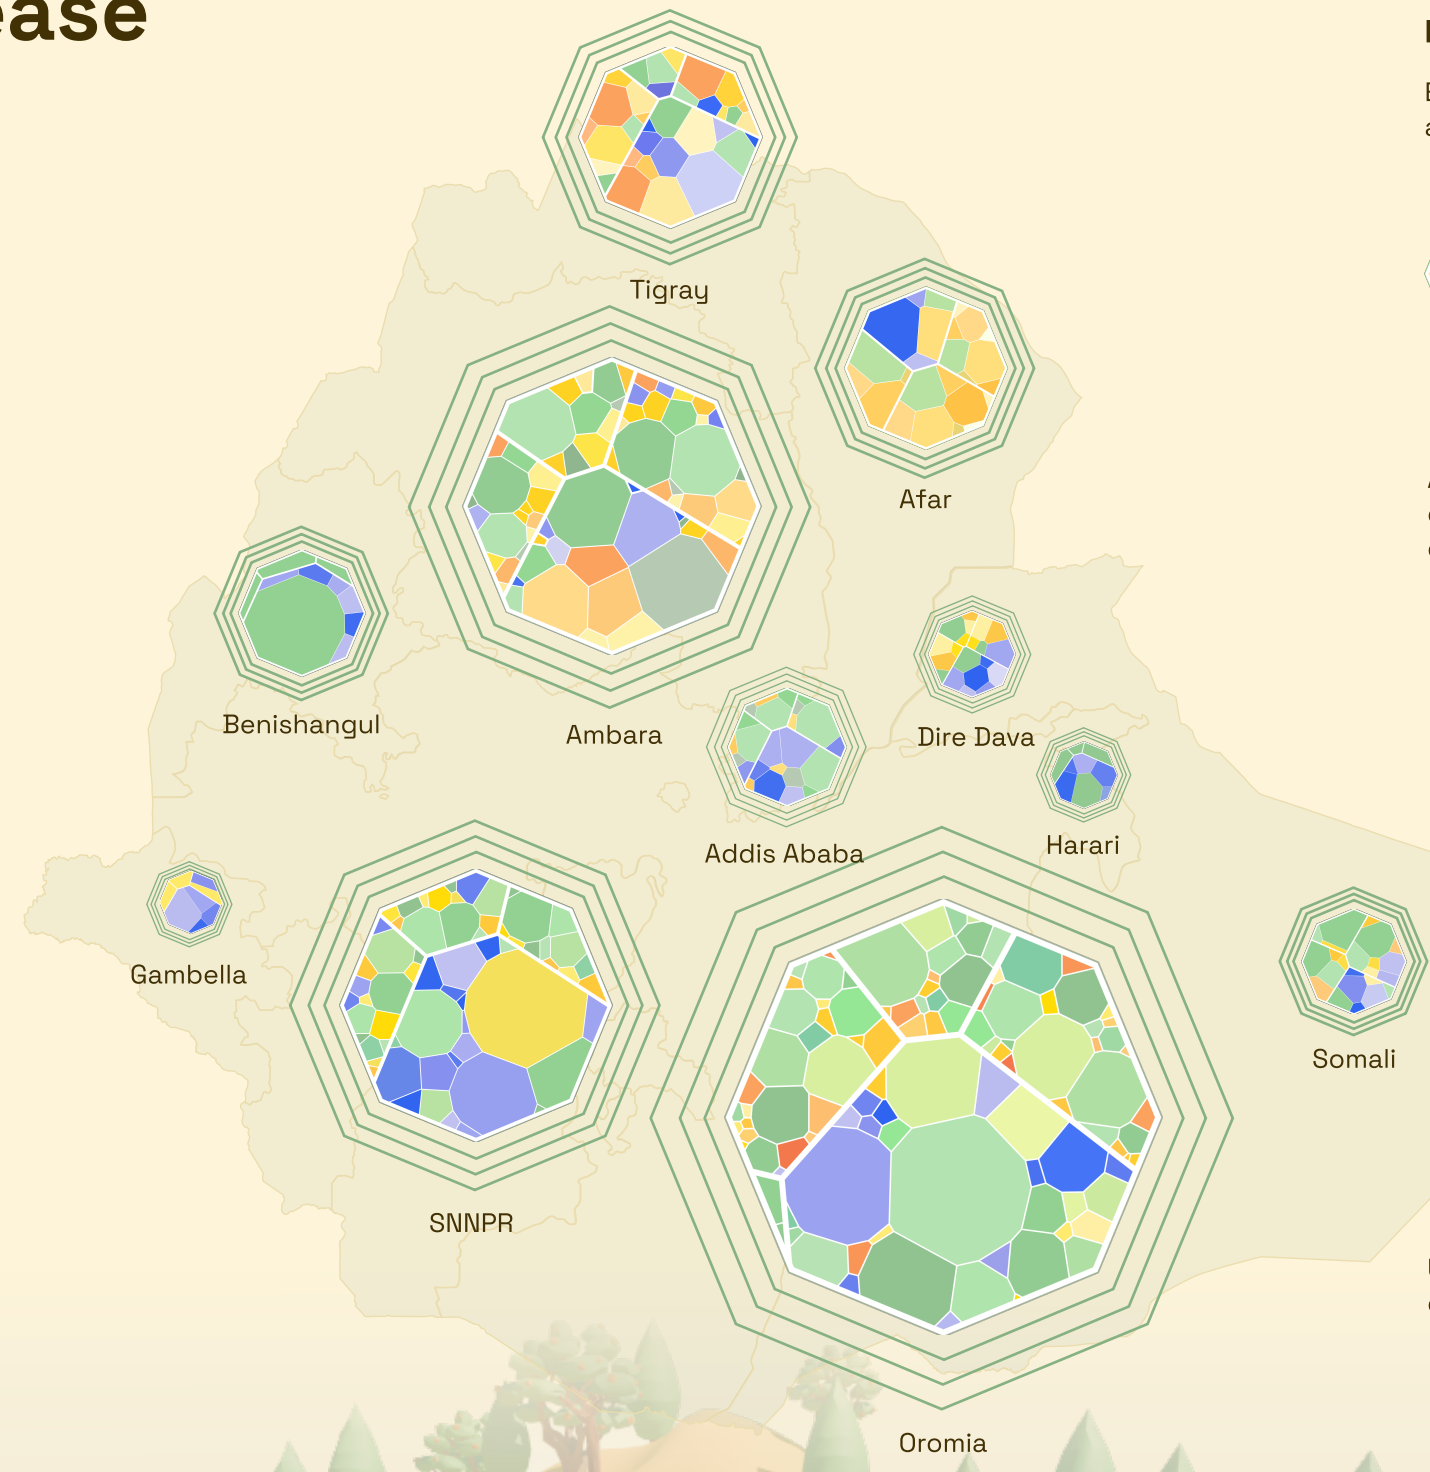

There is an uneven distribution of publications among the Ethiopian regional states.

Studies of 4 species are more representative in Oromia, SNNPR and Amhara.

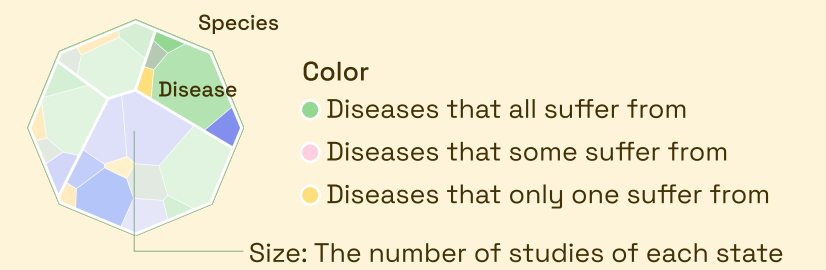

Most of the disease research subjects are cattle in most states.

## LEGEND

Each octagon is a macro area, divided into diseases and species.

Area of the portions = total number of studies by diseases and species. For each species, the number of studies in the state is indicated

Using the two sizes of the cattle model to represent the different numbers of cattle
